Mastering Model Deployment & Inference   S22 Cohort

31st of August, 2022

This cohort-based course was a two-week, intensive curriculum that combined teaching from research, case studies and industry knowledge. Participants covered topics that included model training, representations & inference, patterns for successful production model deployment, approaches to model observability, identified key characteristics of common ML outages in order to avoid them and applied common approaches to increase model observability via review of industry tooling.
